Profile

Computer Science student with a strong foundation in data manipulation, statistical analysis, and database management. Hands-on experience building ETL pipelines, querying relational databases, and developing interactive dashboards using Python, SQL, and Power BI. Capable of translating complex datasets into actionable business insights.

Education

Surajmal College of Engineering and Management

Bachelor of Technology in Computer Science, CGPA-7.5

2021 – 2025

Kichha, Uttarakhand

Kids Paradise Senior Secondary School

Intermediate- 72.4%

2018-2020

Dineshpur, Uttarakhand

Universal Senior Secondary School,

Matriculation- 71.5%

Till 2018

Haldwani, Uttarakhand

Projects

Basket Analysis | *Power BI*

- Designed basket analysis logic using advanced DAX formulas within Power BI to calculate the Support, Confidence, and Lift.
- Cleaned and structured raw sales data using Power Query to establish a clean database model.
- Developed and presented an interactive Power BI dashboard featuring dynamic visuals to identify top-selling product combinations.

Vendor Performance Analysis | *SQL, Python, Power BI*

- Built an ETL pipeline to load and clean large raw datasets into a structured SQL database.
- Used Python to calculate metrics like gross profit and applied basic statistics to find slow-moving inventory.
- Built an interactive Power BI dashboard to track top-selling brands and visualize vendor sales performance.

Banking Analysis | *Python, Power BI*

- Used Python to handle missing values, clean up multi-table relational bank data, and identified early customer trends.
- Wrote DAX and Python formulas to group clients into low/mid income bands and calculate account processing fees.
- Built an interactive Power BI dashboard tracking crucial metrics like total loans, customer deposits, and account types.

Walmart Sales Analysis | *SQL, Python*

- Wrote SQL queries to calculate total transactions, popular payment methods, and items sold per store branch.
- Ranked product categories by total profit and calculated average customer ratings across different cities using Python.
- Grouped hourly and daily sales data to identify peak transaction shifts and track year-over-year branch revenue trends.

Hospitality Analysis | *Power BI, Power Query, DAX*

- Built an interactive dashboard to monitor key metrics like room occupancy rates, average daily rates, and revenue per available room.
- Used Power Query to clean messy booking files, format transaction dates, and connect customer feedback tables.
- Created dynamic bar charts and filters to help managers compare room performance, cancellation trends, and booking channels.

Technical Skills

Programming Languages: SQL, Python

Tools/Frameworks: Excel, Power BI, Tableau, VS Code, Power Query, DAX.

Additional: DBMS, Data Visualization, Data Management, Data Analysis, Data Cleaning

Certification

Data analysis by cognitive class

[CERTIFICATE](#)

Data analysis by HP life.
